JAWA

Visual research dossier: how they live, work, travel, scavenge and build

Official Lucasfilm imagery: Jawas inside a sandcrawler. Source [S4]. Image used here for private research/reference; Star Wars imagery remains © Lucasfilm/Disney.

Purpose. This is a visual evidence pack for worldbuilding. It separates **canon/official evidence** from **licensed interpretation** and **fan extrapolation**. The latter is useful as design inspiration, but it is not treated as canon.

The strongest visual conclusion is that Jawa life is not “a desert hut culture with a vehicle.” The sandcrawler itself is the settlement: home, workshop, warehouse, foundry, droid pen, market stall and long-range transport. Canon is surprisingly sparse on private domestic spaces, so the dossier flags the sleeping/living-quarter gap rather than inventing details.

1. What the evidence actually supports

Theme	Evidence strength	What is supported
Sandcrawler = home	HIGH	StarWars.com explicitly calls sandcrawlers fortress-homes / transportation and shelter. [S1][S2]
Scavenging / salvage	HIGH	Jawas comb deserts for scrap and mechanicals, capture droids and resell refurbished machines. [S1]
Improvised technology	HIGH	Their ion blasters are customized from scavenged parts. [S3]
Industrial interior	HIGH-MED	Official imagery shows a cavernous dirty interior; reference sources describe cargo holds and scrap processing. [S4][S11]
Crew/living quarters	MED	Reference sources explicitly say quarters exist, but screen imagery rarely resolves them. [S11]
Beds / sleeping furniture	LOW	No clear canonical image of a normal Jawa bedroom/bunk was found in this pass. Fan cutaways fill the gap, but speculatively. [S15]
Trading as social role	HIGH	Film/TV repeatedly depicts Jawas selling goods; Teeka explicitly frames trade in relation to feeding a tribe. [S5][S7][S10]
Offworld Jawa culture	HIGH	The Mandalorian depicts offworld Jawas on Arvala-7, again using a sandcrawler and trading. [S8][S9]

Important negative finding: “Where do they sleep?” is exactly the kind of question for which the franchise gives us architecture but almost no intimate domestic staging. A responsible reconstruction should therefore use the known industrial shell and cramped clan-scale occupancy, then make sleeping arrangements visibly improvised rather than presenting a specific bunk design as canon.

2. The sandcrawler as a moving settlement

Secondary-reference artwork showing the crawler as monumental mobile architecture. Source trail [S11].

• **Scale:** StarWars.com gives a 40 m length; secondary references describe roughly 20 m height and enough room for a clan. [S2][S11]
• **Functions:** transport + shelter, huge cargo volume, droid storage, scrap-processing, and living quarters. [S2][S11]
• **Acquisition logic:** the machines are inherited industrial hardware rather than elegant purpose-built Jawa vehicles; Jawas adapt old mining machinery to their own scale and practices. [S11]
• **Visual language:** rust, mismatched panels, inaccessible human-scale voids, low Jawa-scale routes threaded through oversized machinery, and lots of vertical circulation make more sense than neat rooms.
• **Settlement implication:** a clan can remain nomadic while still carrying a permanent “town” with it. That is the key design precedent for a Jawa gravship.

3. Inside: workshop first, home second

Official image, sandcrawler interior. The floor is rough and dirty; scale is dominated by industrial machinery rather than domestic furniture. [S4]

The strongest canonical interior image is revealing precisely because it is so un-domestic. Jawas inhabit an industrial ruin. Lighting is sparse and localized; machinery is enormous relative to them; the floor reads as work surface and transit corridor rather than finished living space.

Design inference: sleeping, eating and social niches should look parasitic on the machinery - cloth hammocks, blanket nests, small cubbies, shelves, dangling personal salvage and tiny heated alcoves fitted into voids between human-scale systems. That is an inference, not an observed canon room.

4. Licensed interpretation: a legible working crawler

Studio MUTI illustration from the licensed book *Star Wars: Exploring Tatooine*. The inset treatment explicitly invites the viewer to imagine interior systems and Jawa work activity. [S13][S14][S19]

This is especially useful for visual design because it bridges canonical silhouette and illustrative interior storytelling. It treats the crawler as an inhabited machine: access ramps, equipment spaces, service platforms and activity at multiple scales. Because this is licensed interpretive art rather than a film set blueprint, use it as a strong stylistic reference, not as proof of exact room placement.

5. The native technology: capture, repair, move, resell

Widely circulated Jawa scavenger illustration. Useful as a visual synthesis of field repair, cutting/welding and pack-carried tools; treat the exact equipment as illustrative rather than film-canon. Source trail [S1][S3] and image-source family indexed through Wookieepedia/GM Binder.

• **Ionization rather than destruction.** Jawa weapons are purpose-built for taking machines intact. Their customized ion blasters disable droids instead of smashing them. [S3][S6]
• **Material handling.** Sandcrawlers use a magnetic suction tube; reference material also describes cranes and large cargo handling. [S2][S11]
• **Repair economy.** Canon defines their business as hastily refurbishing recovered machinery for resale. [S1]
• **Industrial reprocessing.** Reference material repeatedly describes scrap-processing / smelting functions inside crawlers. [S11][S12]
• **High practical competence, low polish.** The recurring aesthetic is functional adaptation: useful machines assembled from found parts rather than standardized manufacturing.

6. Trade is part of the habitat

Official *Obi-Wan Kenobi* still featuring the Jawa trader Teeka. StarWars.com summarizes Teeka as a shrewd entrepreneur and quotes, “I’ve got a tribe to feed.” [S10]

Jawa domestic economy is outward-facing. The crawler does not merely store family possessions; it carries inventory. The droid-sale sequence in *A New Hope* turns the exterior apron of the crawler into a pop-up market. Teeka reinforces a useful social reading: bargaining is tied directly to clan provisioning, not depicted as a separate merchant profession. [S5][S7][S10]

Visual cue for a lived-in Jawa ship: blur the categories “personal storage,” “sale stock,” “spare part,” and “decoration.” A part may be hung as a trophy today, cannibalized tomorrow, and sold the next day.

7. Where they sleep: evidence, gap, and best reconstruction

What is known: sandcrawlers contain quarters for crew/passengers and can house an entire Jawa clan. [S11] A 1987 West End Games source even centers a story on the experience of being inside a crawler. [S12]

What is not visually established: I found no strong, clearly canonical still that shows a normal Jawa sleeping room, bed, bunk, galley or family apartment. Searches tend to return general crawler interiors, cutaways, fan models, toys, or unrelated desert interiors.

Best fan reconstruction found: the detailed CC-licensed Sketchfab model by tegnemaskin explicitly includes cockpit, workshop, smelter/forge, repair room, storage, living quarters, grinders, cranes, magnets and conveyors. The artist also plainly states that much of the interior is guesswork and places living quarters high in the crawler near the cockpit. That candor makes it unusually useful: it shows exactly where fan extrapolation begins. [S15]

For a hand-authored RimWorld map, I would therefore make “sleeping” visually humble: 2-4-tile cubbies or communal niches wedged into the superstructure, low ceilings where possible, cloth and salvaged insulation, almost no dedicated furniture, and personal junk clustered tightly around each berth. The ship should spend dramatically more floor area on salvage, machines, cargo and circulation than on bedrooms.

8. Fan-art design language worth mining

Source	What to look for	Canon status
Tony Weinstock - Jawa Scavenger Rig [S16]	A mobile scrapyard scaled up beyond the classic crawler; cranes, improvised superstructure, open work decks, droids everywhere.	Fan art / concept
NicoFari - Jawa comm [S17]	A single Jawa as a walking tool chest: oversized pack, cables, antennae, improvised electronics, layered pouches.	Fan art
Grimbro - The Jawas [S18]	Armed clan members and sandcrawler silhouette; useful for making Jawas read as capable desert operators rather than comic mascots.	Fan art
tegnemaskin - interior model [S15]	Full speculative spatial program: forge, workshop, storage, living quarters, cranes/conveyors.	Fan 3D model; CC Attribution
Studio MUTI [S13][S19]	Licensed stylization that makes crawler functions visually legible without losing the rusty original silhouette.	Licensed interpretation
Incredible Cross-Sections trail [S21]	Widely circulated cutaway with machinery, decks and labels. Good architecture reference; obtain from the book/source rather than treating reposts as authoritative.	Official reference publication / repost trail

The most productive fan-art pattern is **densification**: artists do not make Jawa technology cleaner, they make it more crowded. More straps, tools, hanging parts, improvised decks, antennas, dangling cables, cranes, and things strapped onto other things. That is the aesthetic to borrow.

9. Visual rules to carry into the RimWorld Jawa gravship

• **The ship is the village.** Avoid a clean separation between “residential module” and “factory module.” Jawas live in the seams of the factory.
• **Big inherited machine / small current inhabitants.** Keep some doors, gantries, tanks and bays comically oversized; add Jawa-scale shortcuts and nests around them.
• **Inventory is scenery.** Put spare droids, broken appliances, crates, conduits, loose panels and salvage piles in ordinary traffic areas.
• **Repair should be visible.** Patched walls, unmatched plating, bypass cables, exposed systems, weld scars and repeated local fixes tell the story better than generic “dirty” textures.
• **Bedrooms should be scarce.** Use tiny private cubbies or communal nest rooms; reserve premium enclosed space for valuable electronics, repair benches and delicate stock.
• **Loading is a ritual space.** The biggest doors/ramps should open directly onto a salvage sorting floor that can also become a market.
• **Nonlethal anti-machine weapons are signature gear.** Ion capture is more culturally distinctive than giving every Jawa a conventional blaster. [S3]
• **Verticality matters.** A crawler is a stacked industrial building on tracks. Use ladders, narrow stairs, overhead crane rails, mezzanines and shafts.
• **Leave dead machinery in place.** Not every inherited system should be useful. Huge obsolete components create the sense that the Jawas occupy a machine older and larger than their own needs.

This dovetails strongly with the existing Jawa gravship campaign concept: a scavenger clan occupying and gradually restoring a much larger inherited industrial vessel is not merely “Star Wars flavored”; it is structurally the same relationship Jawas already have with sandcrawlers.

10. Source index and image trail

All URLs below were checked during compilation. “Fan” sources are included deliberately for inspiration and are not evidentiary substitutes for canon.

S1 - StarWars.com - Jawa Databank

https://www.starwars.com/databank/jawa

Canon overview: scavenging, cobbled-together weaponry, droid capture/refurbishment, sandcrawlers as fortress-homes.

S2 - StarWars.com - Sandcrawler Databank

https://www.starwars.com/databank/sandcrawler/

Canon overview: huge treaded fortresses used as transportation and shelter; magnetic suction tube; 40 m length.

S3 - StarWars.com - Ion Blaster Databank

https://www.starwars.com/databank/ion-blaster/

Canon: Jawa ion blasters are customized from scavenged parts and disable droids electronically.

S4 - StarWars.com - 7 Things You Might Not Know About Jawas

https://www.starwars.com/news/much-to-learn-you-still-have-7-things-you-might-not-know-about-jawas

Official feature with interior sandcrawler imagery and cultural notes.

S5 - StarWars.com - A New Hope 50th filming article

https://www.starwars.com/news/star-wars-50-filming-begins

Production stills and context for the droid-sale sequence beside the sandcrawler.

S6 - StarWars.com - R2-D2 Captured by Jawas

https://www.starwars.com/video/r2-d2-captured-by-jawas

Canonical sequence showing field capture of a droid with ion weaponry.

S7 - StarWars.com - Bad Motivator

https://www.starwars.com/video/bad-motivator

Canonical droid-market scene at the Lars homestead.

S8 - StarWars.com - The Mandalorian Chapter 2 Episode Guide

https://www.starwars.com/series/the-mandalorian/chapter-2-guide

Official guide to offworld Jawas on Arvala-7; useful evidence that Jawa culture and sandcrawler use are not limited to Tatooine.

S9 - StarWars.com - Arvala-7 Databank

https://www.starwars.com/databank/arvala-7

Canon: sparse frontier world where vapor farmers trade with Jawa settlers.

S10 - StarWars.com - Obi-Wan Kenobi quotes (Teeka)

https://www.starwars.com/news/obi-wan-kenobi-disney-plus-quotes

Official still and characterization of Teeka as a trader with a tribe to feed.

S11 - Wookieepedia - Sandcrawler

https://starwars.fandom.com/wiki/Sandcrawler

Secondary reference collating canon/Legends details: cargo holds, scrap processing and quarters for crew/passengers; entire clan capacity.

S12 - Wookieepedia - Life in a Jawa Sandcrawler

https://starwars.fandom.com/wiki/Life_in_a_Jawa_Sandcrawler

Reference to the 1987 West End Games narrative describing life aboard a crawler.

S13 - Studio MUTI - Star Wars: Exploring Tatooine

https://studiomuti.co.za/star-wars-exploring-tatooine

Licensed illustrated interpretation; includes sandcrawler cutaway-like inset scenes.

S14 - StarWars.com - Exploring Tatooine First Look

https://www.starwars.com/news/star-wars-exploring-tatooine

Official Lucasfilm feature confirming the licensed book and Studio MUTI artwork.

S15 - Sketchfab - Sandcrawler incl. interior by tegnemaskin

https://sketchfab.com/3d-models/star-wars-sandcrawler-incl-interior-c9de710922e64147a4ff1a3639071d1f

Fan-built 3D interior. Explicitly speculative: cockpit, workshop, forge, repair room, storage, living quarters, cranes, magnets and conveyors.

S16 - Tony Weinstock - ArtStation portfolio

https://tonyw.artstation.com/

Fan/concept-art source; portfolio includes Jawa Scavenger Rig.

S17 - NicoFari - Jawa comm (DeviantArt)

https://www.deviantart.com/nicofari/art/Jawa-comm-709656314

Fan art emphasizing a heavily equipped wandering Jawa with scavenged tools and pack gear.

S18 - Grimbro - The Jawas (DeviantArt)

https://www.deviantart.com/grimbro/art/Day-5-of-13-Nights-of-Halloween-The-Jawas-567884382

Fan art portraying armed Jawas and the sandcrawler.

S19 - MUTI project on Behance

https://www.behance.net/gallery/153519095/Star-Wars-Exploring-Tatooine

High-quality portfolio presentation of the licensed Tatooine illustration series, including the Jawa Sandcrawler.

S20 - Heritage Auctions - Star Wars Blueprints

https://movieposters.ha.com/itm/movie-posters/science-fiction/star-wars-blueprints-ballantine-books-1977-near-mint-blueprint-portfolio-set-of-15-13-x-19-science-fiction-total-15-items-/a/161906-52330.s

Documents that the 1977 blueprint portfolio included the Jawas' Sandcrawler; useful production-design trail.

S21 - Reddit - Sandcrawler cutaway discussion

https://www.reddit.com/r/ThingsCutInHalfPorn/comments/nzdtol/jawa_sandcrawler_1600_x_1044/

Community pointer identifying the widely circulated cutaway as Star Wars Incredible Cross-Sections / Complete Vehicles.

11. Image-use and research note

This PDF is a private research compilation. Embedded images are used at reference resolution to document visual sources and are accompanied by source/provenance labels. Copyright in Star Wars film/television imagery belongs to Lucasfilm/Disney; third-party artwork belongs to its respective creators. For any public redistribution, presentation, publication or mod promotional material, follow the original source license and obtain permission where required.

Search limitation: the web contains many Pinterest and reposted copies of Jawa images with broken attribution. I favored original/official pages where practical and retained repost trails only when they pointed to a recognizable work or publication. The absence of a canonical Jawa bedroom image is therefore a research finding, not a claim that no such image exists anywhere in every licensed publication.

EXPANDED IMAGE ATLAS

Jawa life, sandcrawler interiors, repair culture, tools, and habitation

This appendix deliberately favors images over prose. Labels distinguish official/canonical evidence from licensed interpretation, secondary reproductions, and fan extrapolation. Cropped panels are enlargements of cited source images, not newly generated imagery.

16 image panels / 10 independent web-sourced images

IMAGE ATLAS 1

Evidence class is printed above each image

CANON / OFFICIAL FILM STILL

Jawas working inside a sandcrawler. This is one of the clearest official images of the crawler as inhabited interior space: industrial shell, sand/dirt underfoot, overhead task lighting, and clustered activity rather than domestic furniture.

SOURCE

StarWars.com - 7 Things You Might Not Know About Jawas

www.starwars.com/news/much-to-learn-you-still-have-7-things-you-might-not-know-about-jawas

CANON / OFFICIAL FILM STILL

A Jawa conducting business beside the crawler and droid stock. Useful for scale, the relationship between crawler and merchandise, and the Jawa role as technician-merchant rather than conventional settler.

SOURCE

StarWars.com - Sandcrawler Databank

www.starwars.com/databank/sandcrawler/

IMAGE ATLAS 2

Evidence class is printed above each image

OFFICIAL-ADJACENT / ILLUSTRATED REFERENCE

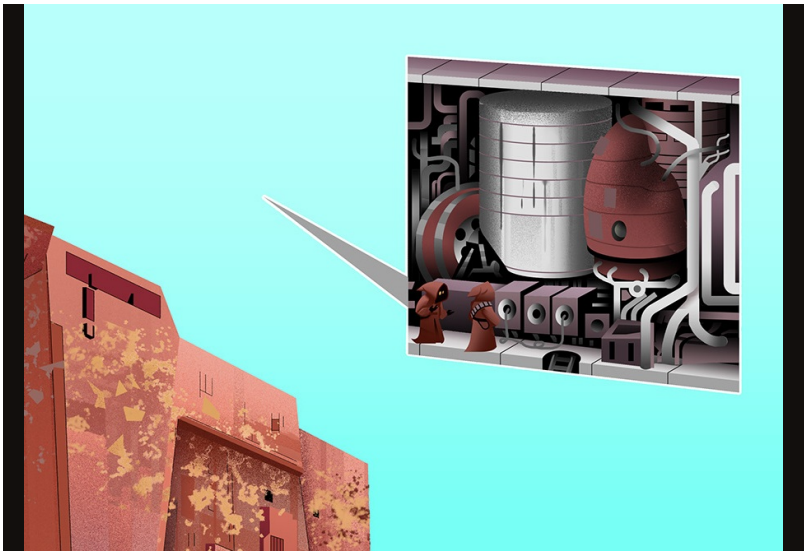
MUTI illustration of the sandcrawler with inset interior scenes. Especially valuable as a compact visualization of ramp handling, machinery, tanks, and workshop activity.

SOURCE

MUTI - Star Wars: Exploring Tatooine

studiomuti.co.za/star-wars-exploring-tatooine

DETAIL FROM SAME REFERENCE



Workshop inset enlarged: Jawas are placed directly among tanks, piping, consoles, and repair stock. This is interpretation, but it is a strong visual vocabulary for a cramped Jawa machine-space.

SOURCE

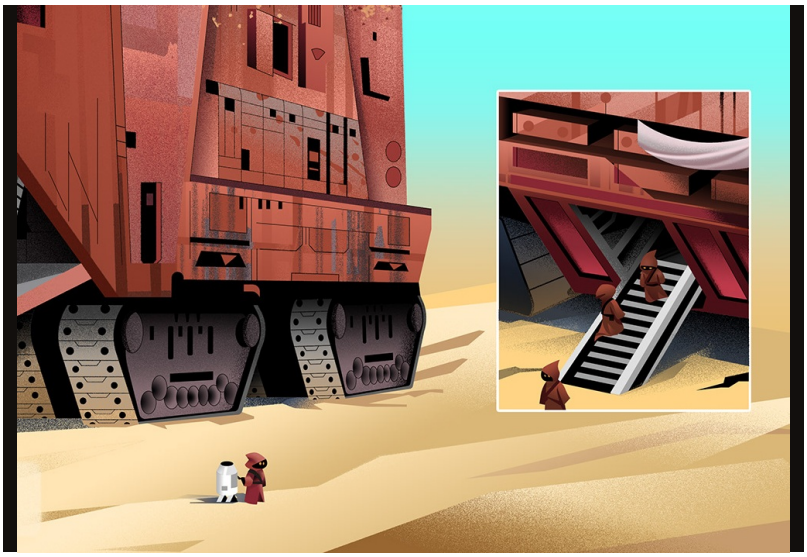
MUTI - Star Wars: Exploring Tatooine

studiomuti.co.za/star-wars-exploring-tatooine

IMAGE ATLAS 3

Evidence class is printed above each image

DETAIL FROM SAME REFERENCE



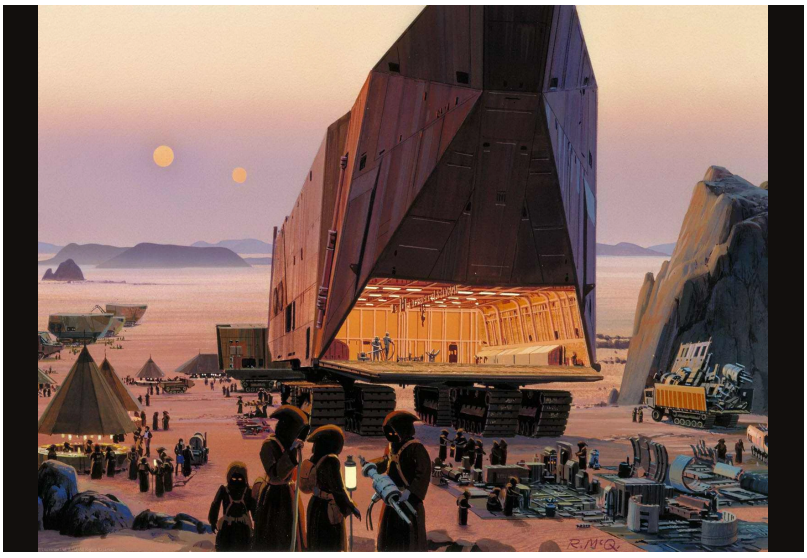
Ramp/loading inset enlarged. The important domestic implication is logistics: living space and work space are inseparable from cargo movement, ramps, and salvage handling.

SOURCE

MUTI - Star Wars: Exploring Tatooine

studiomuti.co.za/star-wars-exploring-tatooine

PRODUCTION CONCEPT ART



Ralph McQuarrie sandcrawler concept art. The crawler reads as a mobile industrial village: enormous open bay, warm interior lighting, salvage spread outside, and Jawas using the vehicle as the center of a temporary camp.

SOURCE

Business Insider feature on Ralph McQuarrie Star Wars art

www.businessinsider.com/star-wars-ralph-mcquarrie-art-2016-9

IMAGE ATLAS 4

Evidence class is printed above each image

LICENSED ILLUSTRATION

Published Jawa mechanic imagery: multiple Jawas collaboratively repairing a machine in the open. Note welding, handheld tools, small work team, parts-first improvisation, and no clean-room distinction between repair and camp life.

SOURCE

Star Wars Alien Archive - retail preview

www.getdigital.de/en/pages/offlineprodukt/star-wars-alien-archive

LICENSED / REFERENCE ART (SECONDARY HOST)

Jawa engineer scene centered on dismantling and repair. The useful visual cues are hand tools, open components, shade canopy, improvised work surfaces, and salvage containers.

SOURCE

The Nerd Nebula - Jawa Mystery (reposting Jawa Engineer artwork)

thenerdnebula.wordpress.com/2014/07/12/jawa-mystery/

IMAGE ATLAS 5

Evidence class is printed above each image

DETAIL FROM SAME ART

Tool-and-salvage detail: mechanical work is shown as close, manual, opportunistic, and performed directly in the dirt. This supports a RimWorld interpretation built around benches, parts piles, and half-disassembled machines.

SOURCE

The Nerd Nebula - Jawa Mystery

thenerdnebula.wordpress.com/2014/07/12/jawa-mystery/

REFERENCE ART

Two Jawas equipped for scavenging with a sandcrawler behind them. Useful for robe bulk, bandolier placement, weapon/tool scale, and the way all carried equipment hangs externally from the garment.

SOURCE

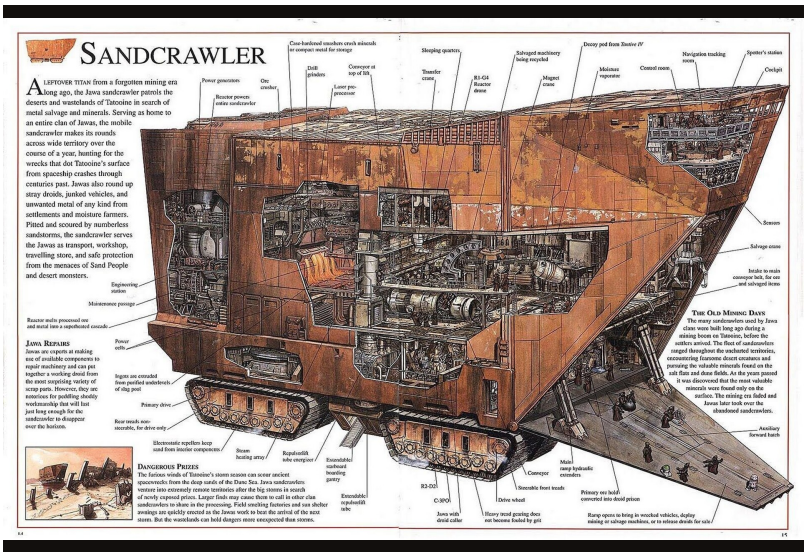
IMAGE ATLAS 6

Evidence class is printed above each image

ILLUSTRATED CUTAWAY / SECONDARY REPRODUCTION



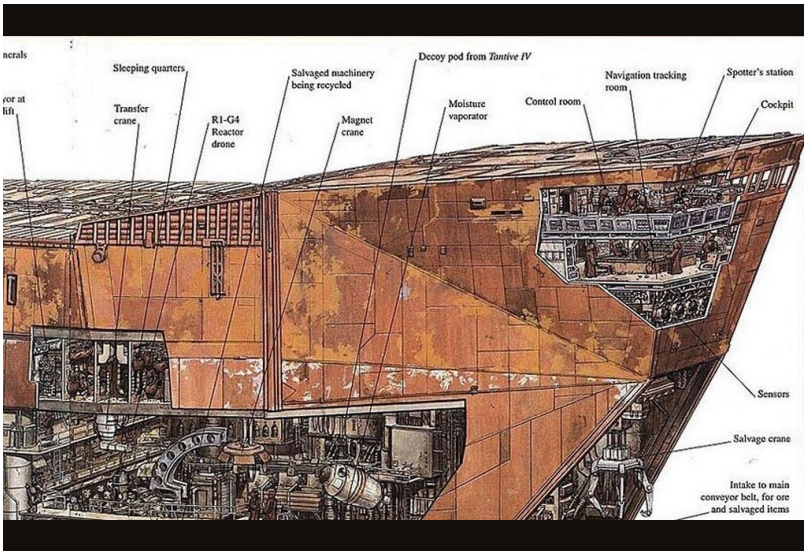
A detailed sandcrawler cutaway reproduced online. It is not a film still, so treat room labels cautiously, but it is exceptionally useful for thinking about vertical industrial zoning, droid storage, power systems, conveyors, cranes, and narrow crew circulation.

SOURCE

Planet Minecraft project page reproducing Sandcrawler cutaway reference

www.planetminecraft.com/project/jawa-sandcrawler-5546965/

CUTAWAY DETAIL



Upper/interior cutaway detail. The image suggests that any Jawa domestic areas are embedded in a machine rather than separated into a conventional house. This is interpretation, not direct canonical proof of bedrooms.

SOURCE

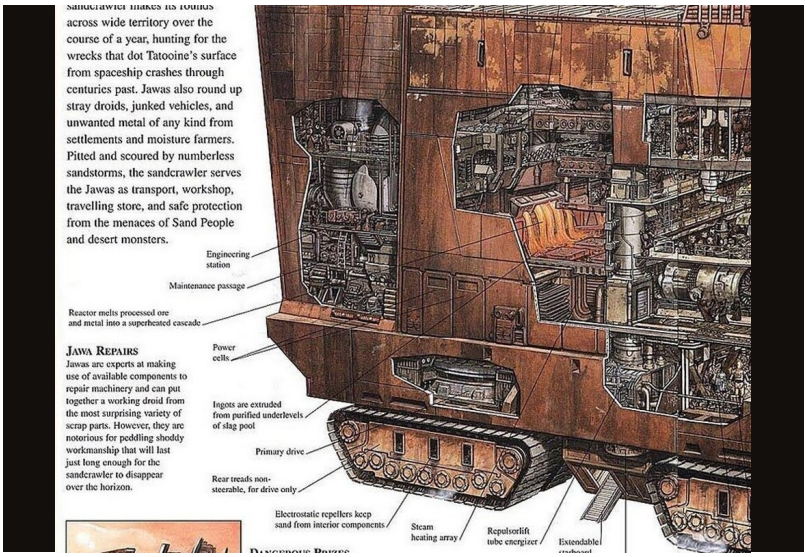
Planet Minecraft project page / reproduced cross-section

www.planetminecraft.com/project/jawa-sandcrawler-5546965/

IMAGE ATLAS 7

Evidence class is printed above each image

CUTAWAY DETAIL



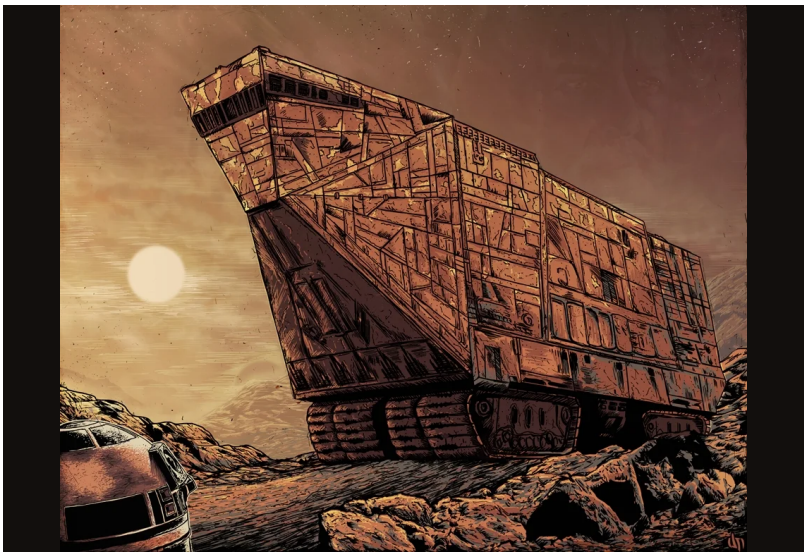
Engineering-zone detail. Dense machinery occupies most of the volume; habitable niches therefore plausibly compete directly with salvage, repair gear, and vehicle systems.

SOURCE

Planet Minecraft project page / reproduced cross-section

www.planetminecraft.com/project/jawa-sandcrawler-5546965/

FAN / ARTIST INTERPRETATION



Daniel Nash illustration emphasizing the crawler as a huge, battered, continuously repaired machine. Strong reference for hull weathering, plates, seams, and the Jawa preference for preserving old machinery indefinitely.

SOURCE

Daniel Nash Illustration

www.danielnashillustration.com/

IMAGE ATLAS 8

Evidence class is printed above each image

FAN / UNVERIFIED COMPOSITE

A web-circulated Tatooine/Jawa settlement image. Do not treat its settlement architecture as canon; use it only as visual brainstorming for what Jawa activity might look like when temporarily operating near fixed desert structures.

SOURCE

WallpaperAccess image collection (secondary/unverified source)

wallpaperaccess.com/

CANON DETAIL CROP

Enlargement of the official interior still. The floor is rough and sandy, the walls are industrial, and the Jawas gather in a small pool of task light. Most importantly, there is no evidence here of conventional beds, tables, or private rooms.

SOURCE

StarWars.com - 7 Things You Might Not Know About Jawas

www.starwars.com/news/much-to-learn-you-still-have-7-things-you-might-not-know-about-jawas

WHAT THE IMAGES ACTUALLY SUPPORT

STRONG EVIDENCE

The sandcrawler is simultaneously transportation, shelter, droid stockroom, repair shop, salvage warehouse, and trading platform.

STRONG EVIDENCE

Jawa technology is visibly cobbled, old, repairable, portable, and adapted from scavenged components rather than built around pristine standardized equipment.

STRONG EVIDENCE

Work is social and clustered: multiple Jawas gather around machines, cargo, trade goods, and repairs.

MODERATE EVIDENCE

Habitation is likely cramped into the same vehicle volume as machinery and stock. Published cutaways reinforce this, but exact domestic room layouts vary by source.

EVIDENCE GAP

There is still very little canonical imagery of Jawa sleeping arrangements. Beds, bunks, family rooms, kitchens, and sanitation should therefore be treated as design extrapolation, not canon.

BEST DESIGN INFERENCE

For a RimWorld Jawa ship, use tiny dark sleeping niches/hammocks/mats embedded beside industrial spaces, communal eating/repair areas, dense salvage piles, low ceilings, task lights, and almost no clean separation between home and workshop.
